This unit is ready to use and requires almost no maintenance. When using the unit, make sure that it is safely mounted onto a table/working plate. The operation is carried out by lever action. Fix the measuring stopper (21) by means of a hexagon screw (29) according to the sketch. The length fence is designed for definition of the corresponding DIN rail length.

Important: In case the shearing plate gets jammed by dirt accumulation:

The base plate can be detached by loosening both screws (11). It is important to take care that the screws must be untied simultaneously since the basic plate stays under spring tension. The 2 springs (15) located in the upper part and the shearing plate (2) can be taken out.

Attention: All parts have to be cleaned and lubricated care-fully. The assembly is to be made in reverse order.

Detachment and assembly should be carried out only by a qualified specialist.
